METAmessage legal

handheld access to the enterprise

Increase your productivity and profits with expanded handheld capabilities. Now mobile lawyers can decrease reliance on laptops and dial-up connections with wireless access to important data – anywhere, anytime.

METAmessage allows you to:

- Interact with corporate information
- Print to any fax machine
- Spell-check outgoing messages
- Access documents on your network
- Get corporate contact information and read and print e-mail attachments

access and manage vital corporate information from your handheld

- **Increase revenues** Never lose a billable minute. METAmessage supports all popular time and billing applications, including DTE and Carpe Diem, so you can quickly update client time anytime, anywhere.
- **Optimize client relationships** Track client matters and quickly access client profiles, notes and activities when you most need to – while you're with the client. METAmessage supports any information system built on a Windows NT 4.0/2000 platform, including InterAction.
- **Increase productivity away from your desktop** Read, search, print or send documents from your corporate network as easily as if you were sitting at your desk. METAmessage gives you access to any network computer file with which you have sharing privileges.
- **Save time** Access the resources of your law library or quickly get information from the Web without opening a browser. METAmessage uses simple forms to help you get the information you need at a moment's notice.

METAmessage works on any BlackBerry Wireless Handheld™

integrates easily with many enterprise system

- Time and billing systems, including Carpe Diem, DTE and CMS
- Client relationship management systems, including InterAction
- Document management programs such as iManage and Hummingbird

installs safely behind the firewall

- Supports NT 4.0/2000 server with Microsoft Exchange or Lotus Domino environment
- Requires BlackBerry® Enterprise Server (BES) with or without Mobile Data Service (MDS)

technical specifications

Leverage your existing messaging infrastructure and get a dependable platform for future growth with METAmessage server's scalable, open architecture. You can easily add capabilities as your needs and messaging technology evolve. All functionality is under complete control of the administrator, so you can provide different services on a user-by-user basis.

- Operates behind the firewall on a Windows NT/2000 server supporting Microsoft Exchange and Lotus Domino environments
- Setup wizards get you up-and-running quickly, with fast user-list imports from Exchange global address lists (GAL) and Domino address books
- Store-and-forward model means users don't lose data when wireless coverage fluctuates
- Can use either e-mail transport or Mobile Data Service
- Automatically updates and synchronizes user lists
- Connects to virtually any document management system, time-and-billing application and research service via Onset and Tibco connectors
- Requires Windows NT 4.0/2000, 500MHz CPU, 256MB RAM with Exchange, 512MB RAM with Domino

interact with corporate information sources

Interact with any of your firm's information systems, including CRM programs such as InterAction; time and billing applications such as Carpe Diem and DTE; SQL/ODBC databases; Web services; SharePoint; document management programs such as iManage and Hummingbird; and proprietary applications.

- Access any number of task-specific forms
- Use the intuitive Forms Designer to quickly custom-design forms and test with the appropriate data source
- Get secure transmission with additional triple-DES encryption
- Eliminate the need for continuous wireless coverage with store-and-forward capabilities

print to any fax machine

Print emails, attachments and other documents using the nearest fax machine.

access documents on your network

Securely access files on your firm's network, including contracts and briefs.

- Access any network computer and file to which you have sharing privileges
- Get secure transmission with additional triple-DES encryption
- Navigate through computers, folders and files with an Explorer-like user interface.
- Read, print or send files with just your handheld
- Set a path for quick access to your most-used folder
- Set a filter to view hidden shares

spell-check outgoing messages

Send mistake-free messages to ensure a professional, edited appearance for all your correspondence.

- Find and replace errors with the click of the track wheel
- Use your firm's unique terms to create a personal word list

get corporate contact information and read and print e-mail attachments

Access all the information you need when you need it, without relying on a laptop or desktop computer.

- Quickly find PINs, e-mail addresses and phone numbers with Exchange global address list (GAL) and Domino address book lookup
- Work seamlessly with automatic conversion of all popular file formats, including documents, spreadsheets, images (.bmp, .gif, .jpg) and slides
- Print to both network printers and fax machines
- Read Office files with their original, rich text format (RTF) intact
- Navigate through a long Word document via the table of contents
- Read Excel spreadsheets intelligently – access multiple sheets, freeze panes, adjust cell size, copy cell content and navigate with both Find and Go to Cell commands, as well as with scrollbars sized relative to the length of the spreadsheet
